“Many of the problems we face have no textbook solution, and so we happily-invent new ones.” – Jeff Bezos

Amazon has built a reputation for excellence and Amazon Internet Services Pvt. Ltd. (AISPL), the local reseller of AWS is carrying on that tradition while leading the world in cloud technologies.

AWS Services provides developers and small to large businesses access to the horizontally scalable state of the art cloud infrastructure like S3, EC2, AMI, Cloud Front and Simple DB, that powers Amazon.com. Developers can build any type of business on AWS Platform and scale their application with growing business needs. We want you to help share and shape our mission to be Earth's most customer-centric company. Our evolution from Web site to e-commerce partner to development platform is driven by the spirit of invention that is part of our DNA. We begin every day by inventing elegant and simple solutions to complex technical and business problems. We're making history and the good news is that we've only just begun.

Overview:

AISPL Support team is seeking engineers that enjoy solving problems, working with customers, and have technical backgrounds from a variety of different fields including Linux/Windows systems administration, database design and optimization, big data analysis, network

administration, and dev ops.

As a member of the AISPL Support team, you will be at the forefront of this transformational technology assisting a global list of companies that are taking advantage of a growing set of services and features to run their mission-critical applications. You will work with leading companies in this space and directly with the engineering teams within Amazon developing these new capabilities. You will be surrounded by people that are smart, passionate about cloud computing and believe that world class support is critical to customer success. AISPL Cloud Support team provides technical support to customers that are building mission-critical applications on top of AWS services.

Why AWS Support?

Follow-the-sun model with support sites located globally: No after hours and on-call in this role.

Career development within Support team: We promote advancement opportunities including Senior Support Engineer, SME, Team Lead, Solutions Architect, Operations Manager and Technical Account Manager.

Variety: Support engineers not only work a broad spectrum of technical issues but may also coach/mentor new hires, develop and present training, partner with development teams on complex issues or contact deflection initiatives, participate in recruiting, write tools/script to help the team or work with leadership on process improvement or strategic initiatives.

Role - Cloud Support Associate

Amazon has a history and tradition of leading the world in Web-related technologies and services. Now, with AISPL Support you have the chance to join us as a Cloud Support Associate who helps individuals and businesses take their computing infrastructures and applications into the Cloud.

Responsibilities

Every day will bring new and exciting challenges on the job while you:

- Learn and use groundbreaking technologies
- Apply advanced troubleshooting techniques to provide unique solutions to our customers' individual needs
- Interact with leading technologists around the world and resolve customer issues
- Drive customer communication during critical events

- Basics in OS concepts / Linux/Unix Systems administration (Ubuntu, CentOS, RedHat, Solaris, etc)
- Basic knowledge in Networking (TCP/IP, DNS) /Database
- Strong customer focus & Multi-tasking skills
- Exposure to Cloud computing

2) DevOps Engineer - AWS

4) Application Developer: DevOps

OFFICE: IBM - Hyderabad, Telangana

FOR APPLY: https://careers.ibm.com/job/12849226/application-developer-devops-hyderabad-in/?codes=JB_Indeed&codes=1-INDEED

Introduction

As an Application Developer, you will lead IBM into the future by translating system requirements into the design and development of customized systems in an agile environment. The success of IBM is in your hands as you transform vital business needs into code and drive innovation. Your work will power IBM and its clients globally, collaborating and integrating code into enterprise systems. You will have access to the latest education, tools and technology, and a limitless career path with the world's technology leader. Come to IBM and make a global impact!

Your Role and Responsibilities

As an Application Developer for Devops, you will contribute to a thriving and growing DevOps Engineering team. You will work in a Kubernetes based micro services environment to support our bleeding edge cloud services. This will include custom solutions, as well as open source

DevOps tools (build and deploy automation, monitoring and data gathering for our software delivery pipeline). You will also be contributing to our continuous improvement and continuous delivery while increasing maturity of DevOps and agile adoption practices.

If you thrive in a dynamic, collaborative workplace, IBM provides an environment where you will be challenged and inspired every single day. And if you relish the freedom to bring creative, thoughtful solutions to the table, there's no limit to what you can accomplish here.

Responsibilities

- Adopt to the given technology to meet the drift of customer and business requirements
- Act as support SPOC for devops and system Administration and components, Provide direct technical support as needed in the planning, coordination, installation, implementation and testing of releases, upgrades, or changes to unix/ Linux operating system, network, and component software.
- Primary support for assigned ISV products along with diagnose unix/ Linux platform system and product issues and follow up with root cause analysis
- Analyze performance issues while providing technical consultation and inquiries from the other IT technical teams
- Assume personal responsibility for resolving problems in most effective way possible within SLA reaching root cause and preventing problems
- Aid with identifying problem management trends
- Develop solution in Shell and Perl scripting for client application as workaround to solve the issues during deployment.
- Handle the production management calls with all the stake holders
- Monitor the application health check during the Go live

Required Technical and Professional Expertise

- Minimum 4+ years of experience in Devops application with Unix/ Linux environment
- Validated knowledge in the following technologies: Unix System Services, Unix/Linux (install/uninstall packages, network interface, basic commands, etc)

- Expertise in popular virtualization technologies (e.g. VMware, Openstack, Power) and micro services architecture
- Solid understanding of Linux and Windows development, debugging, administration and automation frameworks - Bash, PowerShell, Chef, Ansible
- In-depth experience delivering new features using agile development practices including continuous integration and automated

Preferred Technical and Professional Expertise

- Proficient in working with high availability environment along with alignment to process
- You love collaborative environments that use agile methodologies to encourage creative design thinking and find innovative ways to develop with cutting edge technologies
- Ambitious individual who can work under their own direction towards agreed targets/goals and with creative approach to work
- Intuitive individual with an ability to manage change and proven time management
- Proven interpersonal skills while contributing to team effort by accomplishing related results as needed
- Up-to-date technical knowledge by attending educational workshops, reviewing publications

About Business Unit IBM Services is a team of business, strategy and technology consultants that design, build, and run foundational systems and services that is the backbone of the world's economy. 5) DevOps Engineer

OFFICE: SmartDocs Business Solutions Pvt. Ltd. - Hyderabad, Telangana

₹2,00,000 - ₹8,00,000 a year - Remote

Job Synopsis:

Are you a fun loving and passionate about technology? Are you ready to build a career that enhance your skills?

Then, we are the right place to start your career in the field of Information Technology. We are totally committed about our employees, our customers, our work culture and especially our technology.

The DevOps team plays a vital role in enabling SmartDocs to provide customers with our world class technology. They are the adhesive that binds the SmartDocs products together. We are an organization who encourages new ideas of employees through collaboration and creativity.

We are seeking for an inventive DevOps engineer to join SmartDocs infrastructure team. The candidate will work with IT teams to provide solutions and be a subject matter expert in DevOps best practices, an ideal eligible candidate should have minimum 0 – 3 years of hands-on experience in Microsoft Azure Cloud platform.

Core Competency:

- B.Tech. / M.Tech in CSE / Software Engineering / IT or an equivalent combination of relevant education.

- Passionate Fresher - 3 years of hands-on experience in the following tools & technologies:

- Cloud Platform: Microsoft Azure (Mandatory), GCP, AWS.
- Code Repository: GitHub
- Configuration Management tools: Chef & Puppet
- Deployment & Other tools: Kubernetes, Jenkins & Docker
- Scripting Languages: Shell & Python
- Data Base: Mongo DB & Elastic search

- o Strong Knowledge with scripting and automated process management via shell scripting.

- o Excited by the opportunity to build highly scalable and world class products.

- o Eager and willing to work in a fast-paced environment.

- o Possesses intellectual humility: smart, driven, creative and able to learn things from slipups, willing to raise others up.

- o Someone who has a muzzle for business concerns and can drive them with technical goals.
- o Strong attitude for forward thinking of complex processes to eliminate manual processing.
- o Must be able to handle multiple tasks and adapt to a constantly changing environment.
- o Must have good understanding of SDLC.
- o Knowledge in Linux, Windows server, Monitoring tools and Shell scripting.
- o Knowledge with implementation of Java applications is added advantage.
- o Ability to use a wide variety of open-source technologies and cloud services.
- o Knowledge of best practices and IT operations in an always-up, always-available service.
- o Self-motivated; demonstrating the ability to achieve in technologies with minimal supervision.
- o Organized, flexible and analytical able to solve problems creatively.

Key Responsibilities:

- As a part of the DevOps team, you will be responsible for configuration, optimization, documentation and support of the infrastructure components of SmartDocs software products.
- Diagnose and develop root cause solutions for failures and performance issues in our production environment.
- Evaluate new tools, technologies, and processes to improve speed, efficiency, and scalability of SmartDocs continuous integration environments.
- Monitor and Support deployment, Cloud based and On-premises Infrastructure.
- Handling of production infrastructure & provide support for systems.
- Assist in planning and reviewing application architecture and design to promote efficient deployment process.
- Troubleshoot server performance issues & handling of continuous integration system.

- Process automation using Shell Scripting & Python.
- System and application installation, configuration & maintenance.
- Collaborate with Technology Services team to manage server space, configuration and security.
- Perform all other duties as assigned related to Servers, Systems & networks.

SmartDocs, provide equal opportunities to all its employees and all qualified applicants for employment without regard to their race, caste, religion, color, ancestry, marital status, gender, sexual orientation, age, nationality, ethnic origin or disability. Our resource policies shall promote diversity and equality in the workplace while encouraging the adoption of international best practices.

Our Company

Hitachi Vantara is part of the Global Hitachi family. We balance innovation with an open, friendly culture and the backing of a long-established parent company, known for its ethical reputation. We guide customers from what's now to what's next by unlocking the value of their data and applications to solve their digital challenges, achieving

outcomes that benefit both business and society.

Our people are our biggest asset, they drive our innovation advantage and we strive to offer a flexible and collaborative workplace where they can thrive. Diversity of thought is welcomed and our employee base is represented by several active Employee Resource Group communities. We offer industry leading benefits packages (flexible working, generous pension and private healthcare) and promote a creative and inclusive culture. If driving real change gives you a sense of pride and you are passionate about powering social good, we'd love to hear from you.

Our Values

Research tells us that some applicants, especially those from underrepresented groups, can be put off from applying for roles if they need flexibility or feel they don't meet all of the set criteria. We strive to create an inclusive environment for all and are open to considering home working, compressed/flexible hours and part-time arrangements. Get in touch with us to explore how we might be able to accommodate your specific needs.

We are proud to say we are an equal opportunity employer and welcome all applicants for employment without attention to race, colour, religion, sex, sexual orientation, gender identity, national origin, veteran or disability status. With Japanese roots going back over 100 years, our culture is founded on the values of our parent company expressed as the Hitachi Spirit:

Wa - Harmony, Trust, Respect

Makoto - Sincerity, Fairness, Honesty, Integrity

Kaitakusha-Seishin - Pioneering Spirit, Challenge

About Clean Harbors:

Clean Harbors Inc. (www.cleanharbors.com) is a NYSE listed US based \$3.3 billion company. Clean Harbors was founded in 1980 near Boston by Mr. Alan S. McKim, who today remains the company's Chairman and CEO.

Everywhere industry meets environment, Clean Harbors is on-site, providing premier environmental, energy and industrial services. Clean Harbors employs a dedicated workforce of 15,000 employees and has over 450 service locations across the U.S., Canada and Mexico. Beyond addressing the environmental needs of its more than 300,000 customers, the Company has been on the front lines of addressing some of the largest emergency response events in North America of the past several decades including the BP Oil Spill in the Gulf of Mexico, the anthrax attacks in New York, the 2015 avian flu outbreak that devastated the poultry industry, Hurricanes Katrina, Rita and Sandy, and the oil pipeline breaks that affected the Yellowstone and Kalamazoo rivers, along with other major chemical releases into the environment.

Clean Harbors India has been strategically established as the Global Capability Center (GCC) to serve our parent company. We take pride in serving some of the most tech savvy business stakeholders at Clean Harbors. The GCC employees form part of our globally integrated teams that provide cutting-edge IT solutions and production support across platforms. Our shared services teams work seamlessly with their global counterparts in providing critical 24x7 support in various functions including Finance, HR, Procurement, IT and Operations. Our aggressive growth plans open significant career advancement opportunities for our employees.

We are operating from Skyview, Hitech City Hyderabad (<http://www.theskyview.in/>). Clean Harbors has substantially invested in the GCC to support its growth plans. The Company has celebrated it's 40th year in 2020 and is counting on the GCC to be a part of extending that track record of success.
